

Use Case 1: Register Account

1. Brief Description

This use case allows a new user (either Job Seeker or Employer) to register an account by providing personal or company information.

2. Flow of Events

2.1 Basic Flow

1. The use case starts when the user selects the “Sign Up” option.
2. The system displays the registration form.
3. The user chooses an account type: Job Seeker or Employer.
4. The user enters the required information:
 - For Job Seeker: full name, email, password, phone number.
 - For Employer: company name, contact email, password, phone number.
5. The system validates the input fields.
6. The system sends a verification email to confirm the account.
7. The user confirms the email link.
8. The system activates the account and redirects to the login page.
9. The use case ends.

2.2 Alternative Flows

2.2.1 Invalid Information

- At Step 5, if any field is missing or invalid (e.g., weak password, invalid email), the system displays an error message and requests re-entry.

2.2.2 Email Already Registered

- If the email is already used, the system shows a message:
“Email already exists. Please login or use another email.”

2.2.3 Verification Timeout

- If the user does not verify the email within 24 hours, the registration link expires, and the user must request a new one.

3. Special Requirements

- Passwords must be stored using encryption.
- Email confirmation link must expire after 24 hours.
- The registration process should complete within 5 seconds.

4. Preconditions

- The system is online and connected to the database.
- The user has to validate the OTP sent to their email.

5. Postconditions

- A new user account is created and verified.
- The system records the registration date and account type.

6. Extension Points

- Step 7, extends to “Resend Verification Email” use-case.

Use Case 2: Login for candidate

1. Brief Description

This use case describes how a user logs into the system to access their account.

2. Flow of Events

2.1 Basic Flow

1. The use case starts when the user clicks “Login”.

2. The system displays the login form.
3. The user enters their email and password. Or, users can login by using your account google.
4. The system validates the credentials.
5. The system authenticates the user and redirects to their dashboard.
6. The use case ends.

2.2 Alternative Flows

2.2.1 Invalid Credentials

- At Step 4, if credentials are invalid, the system displays: "Incorrect email or password." The user may retry or choose "Forgot Password".

2.2.2 Account Locked

- If the account is locked after multiple failed attempts, the system notifies: "Account temporarily locked for security reasons."

3. Special Requirements

- Passwords must not be displayed in plaintext.
- The system must validate credentials within 3 seconds.
- Failed attempts must be logged.

4. Preconditions

- The user already has a registered account.

5. Postconditions

- A new session is created for the user.
- The system updates the last login timestamp.

6. Extension Points

- Step 4: may extend to “Forgot Password” use-case.

Use Case 3: Apply a Job post (Candidate)

1. Brief Description

This use case enables a job seeker to apply for a selected job by uploading or selecting an existing resume.

2. Flow of Events

2.1 Basic Flow

1. The use case begins when a job seeker selects a job post.
2. The system displays job details.
3. The user clicks the “Apply Now” button.
4. The system checks if a resume exists.
5. The user uploads a new resume or selects an existing one, fills up needed information.
6. The system records the application and displays a confirmation.
7. The use case ends.

2.2 Alternative Flows

2.2.1 No Resume Uploaded

- At Step 4, if no resume is found, the system prompts the user to upload one before continuing.

2.2.2 Application Already Submitted

- If the user already applied for the same job, the system notifies: “You have already applied for this position.”

2.2.3 Upload Failure

- If the upload fails (e.g., large file, network error), the system displays an error and returns to Step 4.

2.2.4 Lack necessary information

- If the information is lacking, the system displays an error and candidates must fill up it.

3. Special Requirement

- Resume file size ≤ 5 MB.
- Supported formats: .pdf, .docx.
- Application confirmation email sent automatically.

4. Preconditions

- The user is logged in as a Candidate.
- The job post is active.

5. Postconditions

- The application is stored in the database.
- Employers can view the applicant's profile.

6. Extension Points

- Step 5: may extend to "Edit Resume" use-case.
- Step 6: may extend to "Send Notification Email".

Use Case 4: Search Job (Job Seeker)

1. Brief Description

This use case enables a Job Seeker to search and filter available job posts according to preferences such as: field, location, part time/ full time, etc.

2. Flow of Events

2.1 Basic Flow

1. The use case begins when the user selects “Find Jobs”.
2. The system displays a search bar and filter options (keyword, location, salary, category).
3. The user enters search criteria.
4. The system queries the job database based on filters.
5. Matching job posts are displayed in a list with summary info.
6. The user clicks on a job title to view full details.
7. The use case ends.

2.2 Alternative Flows

2.2.1 No Results Found

- At Step 5, if no jobs match the criteria, the system displays: “No jobs found” and suggests related searches.

2.2.2 Invalid Input

- If the user enters invalid characters or leaves all filters blank, the system prompts to adjust search input.

2.2.3 Network Timeout

- If the search request fails, the system displays “Connection error, please try again.”

3. Special Requirements

- Search results must load within 3 seconds.
- Support fuzzy keyword matching.
- Results sorted by posting date by default.

4. Preconditions

- User logged in as Job Seeker (optional for guest browsing).

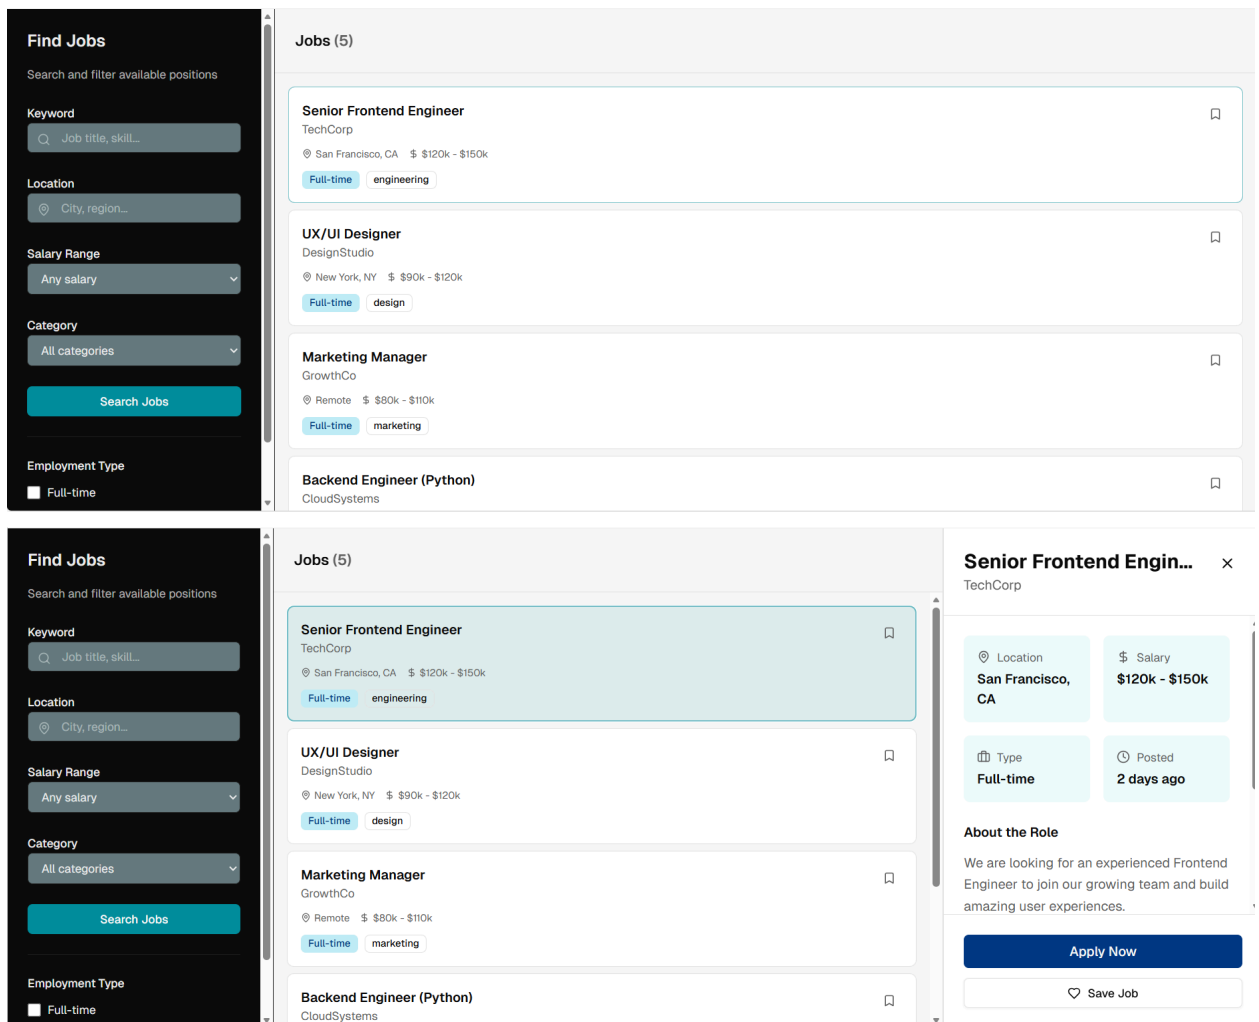

- Job database available.

5. Postconditions

- Displayed job list reflects latest matching records.
- System logs user search for recommendation purposes.

6. Extension Points

- Step 6 may extend to “Apply for Job”.
- Step 5 may extend to “Save Job to Wishlist”

USE CASE 5: Upload CV

Actor: Job Seeker

Related Stakeholders: Job Seeker, Employer

1. Brief Description

This use case allows a Job Seeker to upload an existing CV file to the system. The Job Seeker can upload the file (e.g., PDF, DOCX), review the uploaded CV, and save it to their profile so that employers can view it when browsing candidate information.

2. Flow of Events

2.1 Basic Flow

1. The use case begins when the Job Seeker selects the **“Upload CV”** option.
2. The system displays an upload interface and instructions.
3. The Job Seeker chooses a CV file from their device (PDF/DOCX).
4. The system validates the file format and size.
5. The system uploads and processes the file.
6. The system displays a preview of the uploaded CV for confirmation.
7. The Job Seeker confirms to **Save** the CV to their profile.
8. The system saves the CV to the user’s account and shows a success message.
9. The use case ends.

2.2 Alternative Flows

2.2.1 Unsupported File Format

- At Step 4, if the uploaded file is not in PDF or DOCX format:
 - The system displays an error message stating: “Unsupported file format.”
 - The system prompts the Job Seeker to upload a valid format.

- The flow returns to Step 3.

2.2.2 File Size Too Large

- At Step 4, if the file exceeds the maximum size limit:
 - The system notifies: “The file is too large.”
 - The Job Seeker is prompted to choose another file.
 - The flow returns to Step 3.

2.2.3 Upload Failure

- At Step 5, if the upload fails due to network/server issues:
 - The system displays an error message and suggests retrying.
 - The flow returns to Step 3.

3. Special Requirements

- The system must support uploading **PDF and DOCX** files.
- Maximum file size limits should be enforced (e.g., 5MB).
- CV files must be securely stored and accessible only to authorized employers.

4. Preconditions

- The Job Seeker is logged into the system.

5. Postconditions

- The uploaded CV is stored in the Job Seeker’s account and available for Employers to view during the recruitment process.

6. Extension Points

- May be extended by “**Manage Profile**” if the Job Seeker wants to edit personal data or replace the uploaded CV later.

USE CASE 6: Update Account Information

Actors: Job Seeker, Employer

1. Brief Description

This use case describes how a user (Job Seeker or Employer) updates their account information, such as email, phone number, and password.

2. Flow of Events

2.1 Basic Flow

1. The use case begins when the user navigates to **Account Settings**.

2. The system retrieves and displays the current account information.
3. The user selects a field to update (email, phone, password, etc.).
4. The user enters new valid information.
5. The system validates the new information.
6. The system updates the account and shows a confirmation message.
7. The use case ends.

2.2 Alternative Flows

2.2.1 Incorrect Current Password

- At Step 5, if the current password is incorrect, the system displays an error.
- The flow returns to Step 3.

2.2.2 Email Already in Use

- At Step 5, if the new email exists in the system, the system displays a conflict message.
- The flow returns to Step 3.

2.2.3 Phone Number Verification Failed

- The system requests OTP verification for new phone numbers.
- If OTP fails, the user must retry verification.

3. Special Requirements

- Passwords must be stored using secure hashing.
- Email/phone changes may require identity verification.

4. Preconditions

- The user is logged into the system.

5. Postconditions

- The updated information is stored and used for future authentication.

6. Extension Points

- May be extended by **Two-Factor Authentication (2FA)** during verification.

USE CASE 7 – Post Job (Employer)

1. Use-Case Name

Post Job

1.1 Brief Description

This use case describes how an Employer creates and publishes a new job posting, providing job details such as title, description, qualifications, and salary.

2. Flow of Events

2.1 Basic Flow

1. The Employer is logged into the system and accesses the **Post Job** section.
2. The system displays the job posting form.
3. The Employer enters job title, job description, responsibilities, requirements, location, and salary (optional).
4. The Employer submits the job posting.
5. The system validates all required fields.
6. The system saves the job posting and publishes it to the job listings.
7. The system confirms that the job post has been successfully created.
8. The use case ends.

2.2 Alternative Flows

A1 – Missing Required Field

- At step 5, if required fields (e.g., title or description) are missing or invalid, system displays an error message.
- The flow returns to step 3.

3. Special Requirements

- Job posts must comply with system content guidelines.

4. Preconditions

- The Employer is logged into the system and has an active account.

5. Postconditions

- A new job posting is visible to job seekers.

6. Extension Points

- Could extend to **Premium Visibility Upgrade** to promote the job listing.

USE CASE 8 – Edit / Update Job Post

1. Use-Case Name

Edit / Update Job Post

1.1 Brief Description

This use case describes how an Employer updates the content of an existing job posting to correct or revise job information.

2. Flow of Events

2.1 Basic Flow

- The Employer accesses the **Manage Posted Jobs** page.
- The system displays a list of existing job postings.
- The Employer selects a job post to edit.
- The system displays the job post details in editable form.
- The Employer modifies job information.
- The Employer submits the update.
- The system validates updated information and saves changes.
- The system displays a confirmation message.
- The use case ends.

2.2 Alternative Flows

A1 – Attempt to Edit Closed Job

- If the selected job is closed/inactive, the system notifies the Employer that editing is not allowed.
- The flow ends.

3. Special Requirements

- The system must keep version history for audit or rollback.

4. Preconditions

- Employers must be logged in and have permission to manage the specific job posting.

5. Postconditions

- Job posting is updated and displayed with new information.

6. Extension Points

- None.

USE CASE 9 – Close Job / Deactivate Job

1. Use-Case Name

Close Job / Deactivate Job

1.1 Brief Description

This use case describes how an Employer closes or temporarily disables a job posting so that it is no longer visible to job seekers.

2. Flow of Events

2.1 Basic Flow

- The Employer accesses **Manage Posted Jobs**.
- The system displays a list of active job postings.
- The Employer selects a job posting to close or deactivate.
- The system requests confirmation.
- The Employer confirms the close/deactivate action.
- The system updates the job posting status to “Closed” or “Inactive”.
- The system confirms the action to the Employer.
- The use case ends.

2.2 Alternative Flows

A1 – Employer Cancels the Action

- At step 5, if the Employer cancels, no changes are made.
- The flow ends.

3. Special Requirements

- Closed job postings must remain stored for historical and reporting purposes.

4. Preconditions

- The employer is logged in.

5. Postconditions

- Job posting is no longer visible to job seekers.

6. Extension Points

- None.

USE CASE 10: View Candidate Applications

Actors: Employer

1. Brief Description

This use case describes how the employer views the list of candidates who have applied for their job postings.

2. Flow of Events

2.1 Basic Flow

- The use case begins when the employer selects a job post.
- The system retrieves all applications associated with the job.
- The system displays the list of candidates.
- The employer reviews the basic information of each candidate (name, position applied for, status).
- The use case ends.

2.2 Alternative Flows

2.2.1 No Applications Found

- If no candidate has applied yet, the system displays “No applications received yet.”

3. Special Requirements

- The candidate list should support sorting and filtering.
- Data must be loaded efficiently to avoid delays.

4. Preconditions

- The employer is logged in.
- The employer has posted at least one job.

5. Postconditions

- The employer may proceed to review or contact specific candidates.

USE CASE 11: Mail Candidate

Actors: Employer

1. Brief Description

This use case describes how the employer sends communication to a candidate for interview, screening, or follow-up.

2. Flow of Events

2.1 Basic Flow

- The employer clicks "Contact Candidate" on the candidate profile.
- The system displays a messaging or email form.
- The employer writes and sends a message.
- The system stores and delivers the message.
- The use case ends.

3. **2.2 Alternative Flows**

2.2.1 Invalid Contact Information

- If contact details are invalid, the system displays an error and suggests requesting the candidate to update.

4. **Special Requirements**

- Messages must be securely stored.
- Email sending may require verification.

5. **Preconditions**

- The candidate profile is available.

6. **Postconditions**

- Contact attempts are saved in communication history.

USE CASE 12: Purchase Access to post jobs (Note)

Actors: Employer

1. Brief Description

This use case describes how an employer purchases a job posting plan in order to gain the right to create and post job listings on the platform.

2. Flow of Events

2.1 Basic Flow

- The Employer navigates to the “**Job Posting Plans**” page.
- The system displays available posting plans (based on number of job posts or validity period).
- The Employer selects a preferred plan.
- The Employer enters payment information and confirms the purchase.
- The system processes the payment.
- The system **activates the job posting access** according to the purchased plan.
- The Employer receives a confirmation message and is redirected to the **Create Job Posting** page to start posting.
-

3. 2.2 Alternative Flows

2.2.1 Payment Failed

- The system notifies the Employer that the payment has failed and prompts the Employer to retry or choose another payment method.

4. 2.2.2 Plan Already Active

- The system informs the Employer that there is already an active posting plan and displays the remaining job posts or remaining validity period.

5. Special Requirements

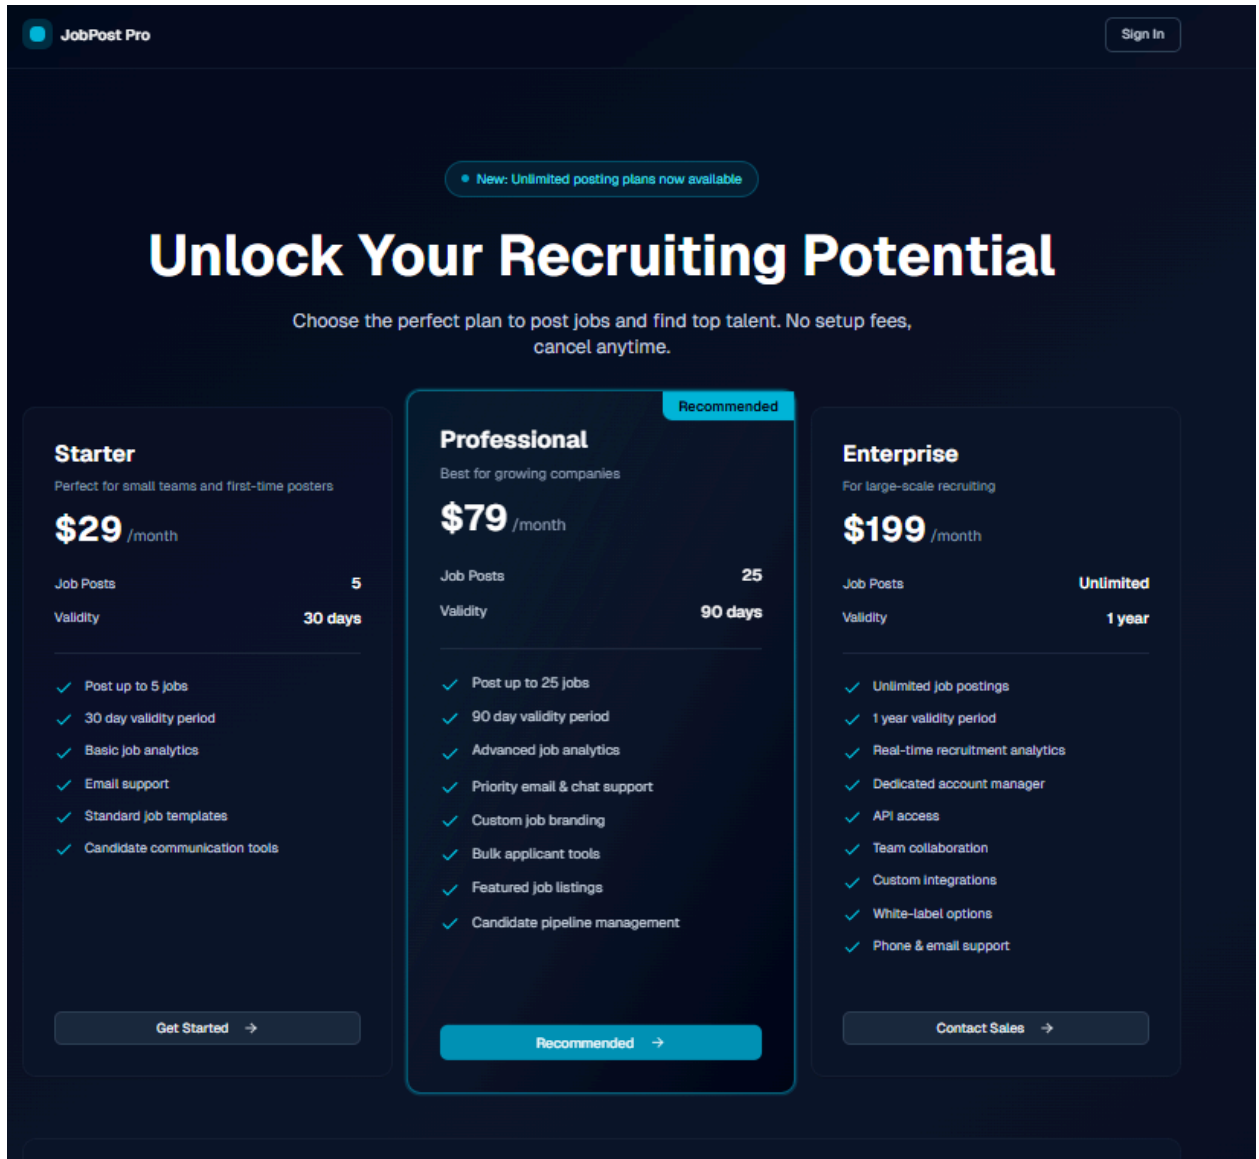

- Secure payment gateway integration.
- Tracking of plan validity period or remaining job posts.
- (Optional) Send invoice/receipt to the Employer’s email.

6. Preconditions

- The employer is logged in.
- The employer has a valid payment method.

7. Postconditions

- The Employer is able to **create and publish job postings** according to the purchased plan's limits.
- The purchased plan is recorded in the system's transaction history.

The image shows a pricing page for 'JobPost Pro'. At the top left is the logo and name 'JobPost Pro'. At the top right is a 'Sign In' button. Below the header is a dark blue banner with a teal button that says 'New: Unlimited posting plans now available'. The main heading is 'Unlock Your Recruiting Potential' in large white text. Below it is a subheading: 'Choose the perfect plan to post jobs and find top talent. No setup fees, cancel anytime.' The page features three pricing plans: 'Starter', 'Professional' (marked as 'Recommended'), and 'Enterprise'. Each plan is presented in a dark blue box with white and teal text. The 'Starter' plan is \$29/month, includes 5 job posts, 30-day validity, and lists features like 'Post up to 5 jobs', '30 day validity period', 'Basic job analytics', 'Email support', 'Standard job templates', and 'Candidate communication tools'. The 'Professional' plan is \$79/month, includes 25 job posts, 90-day validity, and lists features like 'Post up to 25 jobs', '90 day validity period', 'Advanced job analytics', 'Priority email & chat support', 'Custom job branding', 'Bulk applicant tools', 'Featured job listings', and 'Candidate pipeline management'. The 'Enterprise' plan is \$199/month, includes unlimited job posts, 1-year validity, and lists features like 'Unlimited job postings', '1 year validity period', 'Real-time recruitment analytics', 'Dedicated account manager', 'API access', 'Team collaboration', 'Custom integrations', 'White-label options', and 'Phone & email support'. Each plan has a corresponding button at the bottom: 'Get Started' for Starter, 'Recommended' for Professional, and 'Contact Sales' for Enterprise.

USE CASE 13: Forgot Password

Actors: Job Seeker, Employer (User)

1. Brief Description

This use case describes how a user resets their password when they forget it. The system verifies their identity through email or phone verification and allows them to create a new password.

2. Flow of Events

2.1 Basic Flow

1. The use case begins when the user selects the **"Forgot Password"** option on the Login page.

2. The system prompts the user to enter their registered **email or phone number**.
3. The user provides the required information.
4. The system checks whether the email/phone exists in the database.
5. The system sends a **reset verification code** (OTP) or **password reset link** to the provided email/phone.
6. The user enters the OTP or opens the reset link.
7. The system verifies the OTP/link authenticity.
8. The system displays the **New Password** form.
9. The user enters a new valid password and confirms it.
10. The system updates the password and displays a success message.
11. The use case ends.

2.2 Alternative Flows

2.2.1 Email/Phone Not Found

- At Step 4, if the account does not exist:
 - The system displays: "**Account not found**".
 - The flow returns to Step 2.

2.2.2 OTP Verification Failed

- At Step 7, if the OTP is incorrect or expired:
 - The system prompts the user to **re-enter or request a new OTP**.
 - The flow returns to Step 5.

2.2.3 Weak New Password

- At Step 9, if the new password does not meet security rules:
 - The system shows password complexity requirements.
 - The flow returns to Step 8.

3. Special Requirements

- Password must meet security rules (minimum length, special characters, etc.).
- OTP must have expiration time.
- Reset link must be single-use and expire after a set duration (e.g., 15 minutes).

4. Preconditions

- The user has previously registered an account.
- The user is on the Login page.

5. Postconditions

- The user's password is successfully updated.
- The user must use the **new password** in the next login.

6. Extension Points

- **Two-Factor Authentication (2FA)** may be required upon next login.
- May connect to **third-party email/SMS gateway**.

USE CASE 14: Manage User Accounts and Job Posts

Actor: Administrator (Admin)

Brief Description:

This use case describes how the Admin manages user accounts (Employer and Job Seeker) and manages existing job posts on the platform.

Flow of Events

2.1 Basic Flow

1. Admin logs into the system.
2. Admin navigates to the **Management Dashboard**.
3. The system displays lists of user accounts and job posts.
4. Admin selects **User Accounts** to view details, update status, or deactivate accounts.
5. Admin selects **Job Posts** to review, approve, edit, or remove posts.
6. The system saves the changes.
7. Admin receives confirmation of the performed actions.

2.2 Alternative Flows

2.2.1 Unauthorized Action

- The system prevents the Admin from performing an action if they lack the required role/permission and displays an error message.

2.2.2 Invalid Data

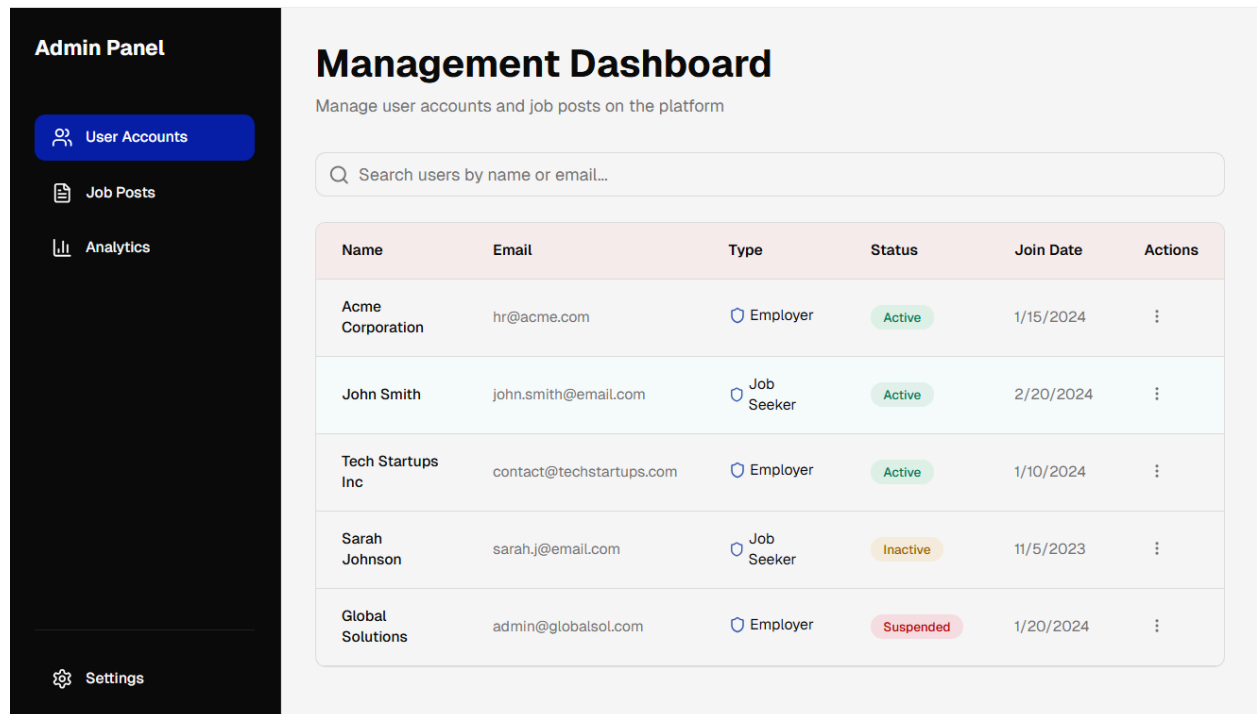

- If Admin attempts to edit details with invalid information, the system notifies and requests correction.

Preconditions

- Admin is logged into the system with correct admin privileges.

Postconditions

- User accounts and job posts are updated, approved, suspended, or removed as required.

USE CASE 15: Monitor and Control Platform Activity

Actor: Administrator (Admin)

Brief Description:

This use case describes how the Admin monitors system activity and ensures that job posts and user accounts follow platform policies. The Admin can investigate reports, remove inappropriate job posts, or suspend abusive accounts.

Flow of Events

2.1 Basic Flow

1. Admin accesses the **Platform Activity Log** or **Reports Center**.
2. Admin reviews flagged job posts or reported user accounts.
3. Admin inspects the details and evaluates the violation severity.
4. Admin decides to:
 - Approve content (no issue), or
 - Issue a warning, or

- Suspend account, or
 - Remove job posts.
5. The system records the action and updates the platform status.
 6. Admin notifies related users if necessary.

Alternative Flows

2.2.1 No Valid Evidence

- Admin marks the report as invalid and closes the case.

2.2.2 Escalation Required

- Admin escalates the issue to the system owner / support team for further investigation.

Preconditions

- Admin has access to moderation and auditing tools.

Postconditions

- The platform remains secure, clean, and compliant with policy.
- Violating accounts or posts are restricted, removed, or penalized appropriately.
